Disteo 23 USER MANUAL

Version: 17-11

Thank you for choosing RUIDE theodolite Disteo 23. Please read the user manual carefully before use.

## 1. PRECAUTIONS

a. Do not collimate the objective lens directly to the sunlight without a filter.
b. Do not store the instrument in extremely high or low temperature, to avoid the sudden or great change of temperature.
c. When the instrument is not in use, store it in the case and avoid shock, dust and humidity.
d. If there is great difference between the temperature in work site and that in store place, you should leave the instrument in the case till it adapts to the temperature of environment.
e. If the instrument has not been used for a long time, you should remove the battery for separate storage. The battery should be charged once a month.
f. When transporting the instrument should be
placed in its carrying case, it is recommended that cushioned material should be used around the case for support.
g. For better accuracy, the instrument should be set up on a wooden tripod rather than an aluminum tripod.
h. Clean exposed optical parts with degreased cotton or less tissue only!
i. Clean the instrument surface with a woolen cloth after use. If it gets wet, dry it immediately.
j. Before opening, inspect the power, functions and indications of the instrument as well as its initial setting and correction parameters.
k. Unless the user is a maintenance specialist, do not attempt to disassemble the instrument by yourself even if you find the instrument abnormal.
I. Do not aim the laser beam to eyes.
m. Keep the screen clean. Do not scratch the screen with sharp objects.

| 3. Focusing Screw | 4. Telescope Eyepiece |
| 5. Horizontal Tangent Screw | 6. Battery |
| 7. RS232 Interface | 8. Screw and Keyboard |
| 9. Tribrach | 10. Tribrach Lock |
| 11. Vertical Tangent Screw |  |

## 3. OPERATION

### 3.1 Keys

| Keys | Function |
| :---: | :---: |
| $\square$ | Shift among 3 main functions |
| 三 | Menu |
| 0 | Power |
| 1 | Number 1 <br> Shortcut to open laser plummet |
| 2 | Number 2 <br> Shortcut to open laser pointer |
| 3 | Number 3 <br> Shortcut to open compensation on Axis X (N) |
| 4 | Number 4 <br> Shortcut to open setting of distance measurement |
| 5 | Number 4 <br> Shortcut to open setting of backlight and sound |
| 6-9,0 | Number 6, 7, 8, 9, 0 |
| 5 | ESC |
| - | Enter |
| $\Delta \nabla$ | Move up and down Turn page |
| -/. | Input - or . |

| 3.2 Abbreviation |  |
| :---: | :--- |
| VA | vertical angle |
| HA | horizontal angle |
| $\mathrm{V} \%$ | shift degree and slope |
| $\mathrm{HL} / \mathrm{HR}$ | horizontal left/right angle |
| VD | vertical distance |
| HD | horizontal distance |
| SD | slope distance |
| hPa | unit of air pressure: hectopascal |
| mmHg | unit of air pressure: millimeter of mercury |
| inHg | unit of air pressure: inch of mercury |
| m | unit of distance: meter |
| ft | unit of distance: feet |
| gon | unit of angle |
| mil | unit of angle |
| ${ }^{\circ} \mathrm{C}$ | unit of temperature: degree Celsius |
| ${ }^{\circ} \mathrm{F}$ | unit of temperature: degree Fahrenheit |

## 4. ANGLE MEDASUREMENT

The function of angle measurement covers measuring and displaying vertical and horizontal angles (VA and HL/HR), 0 set, horizontal set (HSet), switching to slope ( $\mathrm{V} \%$ ), switching Face Right and Face Left ( $R / L$ ), etc.

### 4.1 Angle

| Ang | Dist Axes |  |
| ---: | :--- | :--- |
| UA | $=252^{\circ} 24^{\prime}$ | $29^{\prime \prime}$ |
| HR | $=39^{\circ} 39^{\prime}$ | $53^{\prime \prime}$ |
| GSet | HSet | U\% |

| OSet: | Set the current angle to $0^{\circ}$. |
| :--- | :--- |
| HSet: | Input an angle to set as the <br> current horizontal angle. |
| V\%: | Shift degree and slope. |
| R/L: | Shift Face Left and Face Right. |

### 4.2 HSet

Press HSet to go the screen of setting horizontal angel.
Input a value of the angle to set as the current horizontal angle. And press OK to confirm.

## 5. DISTANCE MEASUREMENT

The function of distance measurement covers measuring and displaying vertical distance (VD), horizontal distance (HD), slope distance (SD), stake out (S.O.), and setting of measuring mode (Mode), etc.

### 5.1 Distance

Aim at the center of the target prism through the optical eyepiece by adjusting the focus, and press Meas to start the distance measurement.

| Ang | 1515 | $\square$ |
| :---: | :---: | :---: |
| UD | : | m |
| HD | : | n |
| SD |  | I |
| Meas | S. |  |

| Meas: | Start to measure the distance. |
| :--- | :--- |
| S.O:: | Start to stake out the distance. |
| Mode: | Setting of the measuring mode |

### 5.2 Stake Out (S.O.)

Input a distance to stake out. It could be a vertical distance, horizontal distance or slope distance, by pressing Shff to shift.

| Shff: | shift the distance type to stake out |
| :--- | :--- |
| $\boldsymbol{A}:$ | delete |
| S.O.: | move right <br> Save the input value and continue <br> to stake out. |

| VD: | The distance difference between <br> the current horizontal distance <br> and the horizontal distance <br> about to stake out. |
| :--- | :--- |

### 5.3 Mode

This setting is to change the mode of measurement.

| Dist.Set】 | $\square$ |
| :---: | :---: |
| MeasMode: $\mathbf{N}$ Times |  |
| Times :1 |  |
| Back | 0K |

Display of Stake Out Result

| Ang J15t Axes | $\square$ |
| :---: | :---: |
| UD : | m |
| HD Dif: | m |
| SD | m |
| Heas S.0. Mode |  |

6. AXES STAKE-OUT

This session is to introduce the stake-out of the point by entering the offset to a baseline. There're 2 options to define the baseline. One is to define by station point and a known bearing angle ( $0^{\circ} 00^{\prime} 00^{\prime \prime}$ ), one is to define by two new points.

Press F1 or F2 to select.

| Ang $\quad$ Dist Axes |  |
| :--- | :--- |
| F1:Set Axes Side |  |
| F2: Set On AnyPt |  |
| F1 | F2 |

6.1 Stake Out of One Side on the Axes

Step 1: Set the theodolite at Point A.
Step 2: Aim at the prism which is set at Point B and press OSEI to set it to $0^{\circ}$.

| Ang | $t$ axes $\quad$ C |
| :---: | :---: |
| Set on A,Aim Axes Point B aset |  |
| Hi | $39^{\circ} 39{ }^{\prime} 51^{\prime \prime}$ |
| bSet | Mext |

Step 3: Input the distance value of the line along Point A to B, and the offset value.

| Ang | Dist Axes | $\square$ |
| :---: | :---: | :---: |
| Input OffUalue, $\mathrm{A} \rightarrow \mathrm{B}$ |  |  |
| Line: |  |  |
| 0ffst 6.000 m |  |  |
|  | $\leftarrow \quad \rightarrow$ |  |

| Line | Offset value along the axes of <br> Point A to B. |
| :--- | :--- |
| Offst | Offset value perpendicular to <br> the axis. |

Step 4: Press Fl to measure. Indicate the poleman to move the prism according to the indications on the screen, until all the values on the screen are 0 .

| H Diff | the angle difference between <br> the HA of Point A to staking out <br> point and the HA of current <br> target |
| :--- | :--- |
| $+\uparrow /-\downarrow$ | offset of perpendicular to the axis |
| $+\mathrm{L} /-\mathrm{R}$ | offset along the axis <br> SWPt |

### 6.2 Stake Out of Any Point

This is the stake out provided that the theodolite is set at any point outside the axis.

## Select F2.

| Ang $\quad$ Dist Axes |  |
| :--- | :--- |
| F1: Set Axes Side |  |
| F2: Set On AnyPt |  |
| F1 | F2 |

Step 1: Measure the distance to Point A and B, then press F4 to next step.

| Ang | Dist Axes |
| :--- | :--- |
| Meas Side A:Undone |  |
| Meas Side B:Undone |  |
| Meaf | MeaB |

Step 2: Input the line and offset values, press F4 to next step.

| Ang |  | Axes | $\square$ |
| :---: | :---: | :---: | :---: |
| Input OffUalue, $\mathrm{A} \rightarrow \mathrm{B}$ |  |  |  |
| Line: .....0.096m |  |  |  |
| Offst 0.00s |  |  |  |
|  | $\leftarrow$ |  | Next |

Step 3: Press F1 to measure. Indicate the poleman to move the prism according to the indications on the screen, until all the values on the screen are 0.

## 7. QUICK SETTING

There're 5 settings in QuickSet: laser plummet, laser pointer, compensation on $X$ axes, distance setting, backlight and sound.

### 7.1 Laser Plummet

It is to open the laser plummet fast. You can also
set the brightness grade.

| [L-Plummet】 | $\square$ |
| :---: | :---: |
| Status: 0n |  |
| Brigt 1 |  |
| Back $\leftarrow$ | OK |

7.2 Laser Pointer

Press F2 to turn on laser pointer.

### 7.3 Compensation on $X$

To turn on and off the compensation on $X$ axis, and check the tilt value.

7.4 Distance Setting

To set various settings of distance measurement.

| [Dist.Set] | $\square$ |
| :---: | :---: |
| Target | ism |
| PrismCons | -3¢ mm |
| MeasMode: N | Times |
| Times :1 | Time |
| Back | OK |

### 7.5 Backlight and Sound

To set the screen backlight, beep of pressing key, crosshair backlight.

| Sound | $\square$ |
| :---: | :---: |
| BL Mode : Doublebl |  |
| bl Time :0ff |  |
| KeySound:0n |  |
| Back | OK |
| Sound | $\square$ |
| Croshair:0n |  |
| Ligt |  |
| Contrast:5 |  |
| Back $\leftarrow$ | 0K |

8. SETTING

It covers 5 settings: unit, angle, distance, PPM, and power.

8.1 Unit

To set the units of angle, distance, temperature and air pressure.

### 8.2 Angle

To set the display of vertical angle.

### 8.3 Distance

To set various parameters of distance.

### 8.4 PPM

To set parameters related to temperature and air pressure.

| [PPH] | $\square$ |
| :---: | :---: |
| Temp: | $20.0{ }^{\circ} \mathrm{C}$ |
| Pres: | 1013.2 hPa |
| PPM : | 0.6 |
| Back | $\rightarrow \quad \mathrm{OK}$ |

8.5 Power

To set parameters related to power.

| SlepTime: 0 Off |  |
| :---: | :---: |
|  |  |
| Off Time:Off |  |
| Battery : LiCell |  |
|  |  |
| Bac | OK |
| pTime | Time to enter to sleep mode if no operation. |
| Time | Time to power off if no operation. |

## 9. CALIBRATION

This program is to calibrate the errors and correc $\dagger$ additive constant.
Cal. $\quad$ F1.Comp_Calibr -

### 9.1 Calibrate i Angle

i angle is also referred to the vertical index difference.
Step 1: On Face Left, collimate the crosshair center in a collimator, and adjust the focus until it is clear. Press OK to proceed to next step.

Step 2: Turn the theodolite to Face Right, and collimate the crosshair center in the collimator until it is clear. Press OK to proceed to next step.

Step 3: The index difference will be shown. Press OK to confirm to calibrate. Caution: If the difference is too big, it will suggest resetting the i angle. Press OK to continue, or Back to return to calibrate again.

Tips: Repeat the calibration of $i$ angle according to 3 steps above if necessary.

### 9.2 Correction of Additive Constant <br> Caution: Do not change the constant if unnecessary.

The additive constant is relatively stable. We suggest inspecting it once or twice a year. You can follow the following steps to do a quick inspection and correction.

## Inspection

Step 1: Set the instrument on a flat ground, mark it as Point A. Along the vertical crosshair, mark Point $B$ and $C$ with a space of 50 m on the same line. Set reflectors on Point $B$ and $C$ precisely.
Step 2: Set the temperature and air pressure in the system, and measure the horizontal distances of $A B$ and $A C$ accurately.
Step 3: Set the theodolite on Point $B$ and level it precisely. Measure the horizontal distance of $B C$ accurately.
Step 4: Now we can get the additive constant by the following formula.

$$
K=A C-(A B+B C)
$$

$K$ should be close to 0 . If $|k|>5 \mathrm{~mm}$, the theodolite should be delivered to professional workshop which has standard alignment to calibrate.

## Correction

According to the formula, input the $K$ value in the following screen.

## 10. INFORMATION

Here you can upgrade firmware and check the system information.

| Infol |
| :--- |
| F1.FW Upgr . |
| F2.Factory Mode |
| F3.Sys.Info |
|  |

10.1 Firmware Upgrade

Firmware upgrade includes the upgrade of angle system and distance system.
It is required to connect the theodolite with computer via RS232 serial interface.

Angle Upgrade

Distance Upgrade

System Upgrade
Hold key 1, and press power to enter to system upgrade. Follow the operation on PC upgrading software.

### 10.2 Factory Mode

To reset to default setting. Input the password to proceed.

| Restore |  |  |
| ---: | :---: | :---: |
| Uerify |  |  |
| Input | $\ldots 172$ |  |
|  |  |  |
| Back | $\leftarrow$ |  |
|  | $\rightarrow$ | Mext |

### 10.3 System Information

You can check the model, serial number, product number, system version, distance version and angle version on it.

| Sys.Info $\quad$ 回 |  |
